

To whomsoever it may concern,

I'm writing to recommend Mohit Aphale for the position of "Automotive Security Engineer" at Valeo. I've had the opportunity to work with Mohit from Sept 2017 – Dec 2019 at Visteon Corporation, Bangalore India. Mohit had worked in Global Cyber Security Team as cyber security engineer. His work included threat modelling and python automations.

Mohit had been a key contributor for the automations within the team by writing tools and script to automate a process that had been beneficial to roll out updates to multiple teams about the CVE's present in the components/libraries. He had worked with team members to automate PT test cases.

I recommend Mohit for the automotive security engineer position since he had been working in this domain from past 3 years and has gained knowledge about system design and threat modelling. He can contribute his knowledge to make the system secure.

Please feel free to contact me at shrivastava.charu07@gmail.com or +48 518141656 if you have any questions.

Sincerely,
Charu Shrivastava
Senior Cyber Security Engineer
Motorola Solutions, Krakow Poland
